Work shop cleaning

High speed dust extraction

Machine cleaning

High tech filter system for the most difficult suction applications

High performance pocket filter with aerodynamically designed filter spreaders for metal chips, liquids and fine dust. Filter material according to dust class M (EN 60335-2-69).

Superior suction performance, optimum handling

Side channel vacuum pump, 5.5, 7.5 or 11 kW, three-phase motor for continuous operation, high vacuum for swarf, grease, oil, liquids, dust and for long suction distances (pipe work system).

The integrated cyclonic separator directs fine dust almost completely and liquids completely into the collection container without affecting the filter

All types have as standard equipment:

- mechanical pre-separator
- high performance pocket filter, dust class M
- pneumatic AirShock® filter cleaning device
- 80 or 150 liter collection container

Pneumatic AirShock® filter cleaning as standard equipment

The AirShock® inflates the filter pockets instantaneously. Accumulated dust drops off and falls down into the collection container.

Three types cover all applications. Make your choice:

	VacPro 56 VacPro 56 M Atex 3D	VacPro 76 VacPro 76 Atex 3D	VacPro 110 VacPro 110 M Atex 3D
